Many-Body Schrödinger Dynamics of Bose-Einstein Condensates (Springer Theses) Kaspar Sakmann

At extremely low temperatures, clouds of bosonic atoms form what is known as a Bose-Einstein condensate. Recently, it has become clear that many different types of condensates -- so called fragmented condensates - exist. In order to tell whether fragmentation occurs or not, it is necessary to solve the full many-body Schrödinger equation, a task that remained elusive for experimentally relevant conditions for many years. In this thesis the first numerically exact solutions of the time-dependent many-body Schrödinger equation for a bosonic Josephson junction are provided and compared to the approximate Gross-Pitaevskii and Bose-Hubbard theories. It is thereby shown that the dynamics of Bose-Einstein condensates is far more intricate than one would anticipate based on these approximations. A special conceptual innovation in this thesis are optimal lattice models. It is shown how all quantum lattice models of condensed matter physics that are based on Wannier functions, e.g. the Bose/Fermi Hubbard model, can be optimized variationally. This leads to exciting new physics.

From reader reviews:

Benny Joiner:

Reading a publication can be one of a lot of action that everyone in the world likes. Do you like reading book therefore. There are a lot of reasons why people love it. First reading a e-book will give you a lot of new information. When you read a reserve you will get new information mainly because book is one of several ways to share the information or their idea. Second, reading a book will make you more imaginative. When you studying a book especially hype book the author will bring you to definitely imagine the story how the character types do it anything. Third, you may share your knowledge to other folks. When you read this Many-Body Schrödinger Dynamics of Bose-Einstein Condensates (Springer Theses), you can tells your family, friends and also soon about yours reserve. Your knowledge can inspire the mediocre, make them reading a reserve.

Richard Poston:

A lot of people always spent their very own free time to vacation or go to the outside with them loved ones or their friend. Did you know? Many a lot of people spent these people free time just watching TV, or maybe playing video games all day long. If you want to try to find a new activity that is look different you can read some sort of book. It is really fun for you. If you enjoy the book which you read you can spent all day every day to reading a publication. The book Many-Body Schrödinger Dynamics of Bose-Einstein Condensates (Springer Theses) it is quite good to read. There are a lot of people who recommended this book. These folks were enjoying reading this book. In case you did not have enough space bringing this book you can buy typically the e-book. You can m0ore simply to read this book through your smart phone. The price is not too costly but this book has high quality.

Robert Goddard:

Playing with family within a park, coming to see the ocean world or hanging out with buddies is thing that usually you will have done when you have spare time, in that case why you don't try thing that really opposite from that. One particular activity that make you not sense tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love Many-Body Schrödinger Dynamics of Bose-Einstein Condensates (Springer Theses), you are able to enjoy both. It is fine combination right, you still would like to miss it? What kind of hang type is it? Oh seriously its mind hangout folks. What? Still don't get it, oh come on its named reading friends.

Christopher Levi:

This Many-Body Schrödinger Dynamics of Bose-Einstein Condensates (Springer Theses) is fresh way for you who has fascination to look for some information mainly because it relief your hunger details. Getting deeper you on it getting knowledge more you know or else you who still having little digest in reading this Many-Body Schrödinger Dynamics of Bose-Einstein Condensates (Springer Theses) can be the light food for

yourself because the information inside this particular book is easy to get simply by anyone. These books produce itself in the form which can be reachable by anyone, that's why I mean in the e-book type. People who think that in e-book form make them feel sleepy even dizzy this e-book is the answer. So there isn't any in reading a reserve especially this one. You can find actually looking for. It should be here for you. So , don't miss the item! Just read this e-book type for your better life in addition to knowledge.
