**Statistical Thinking in Epidemiology** Yu-Kang Tu, Mark S. Gilthorpe

While biomedical researchers may be able to follow instructions in the manuals accompanying the statistical software packages, they do not always have sufficient knowledge to choose the appropriate statistical methods and correctly interpret their results. **Statistical Thinking in Epidemiology** examines common methodological and statistical problems in the use of correlation and regression in medical and epidemiological research: mathematical coupling, regression to the mean, collinearity, the reversal paradox, and statistical interaction.

**Statistical Thinking in Epidemiology** is about thinking statistically when looking at problems in epidemiology. The authors focus on several methods and look at them in detail: specific examples in epidemiology illustrate how different model specifications can imply different causal relationships amongst variables, and model interpretation is undertaken with appropriate consideration of the context of implicit or explicit causal relationships. This book is intended for applied statisticians and epidemiologists, but can also be very useful for clinical and applied health researchers who want to have a better understanding of statistical thinking.

*Throughout the book, statistical software packages R and Stata are used for general statistical modeling, and Amos and Mplus are used for structural equation modeling.*

### **From reader reviews:**

#### **Mary Richards:**

The book Statistical Thinking in Epidemiology gives you the sense of being enjoy for your spare time. You may use to make your capable a lot more increase. Book can to get your best friend when you getting anxiety or having big problem along with your subject. If you can make examining a book Statistical Thinking in Epidemiology to become your habit, you can get a lot more advantages, like add your capable, increase your knowledge about a few or all subjects. You could know everything if you like start and read a reserve Statistical Thinking in Epidemiology. Kinds of book are several. It means that, science e-book or encyclopedia or other folks. So , how do you think about this e-book?

#### **Brandon Phelan:**

This Statistical Thinking in Epidemiology book is just not ordinary book, you have after that it the world is in your hands. The benefit you get by reading this book is actually information inside this reserve incredible fresh, you will get data which is getting deeper an individual read a lot of information you will get. That Statistical Thinking in Epidemiology without we know teach the one who reading it become critical in imagining and analyzing. Don't always be worry Statistical Thinking in Epidemiology can bring whenever you are and not make your tote space or bookshelves' grow to be full because you can have it with your lovely laptop even cellphone. This Statistical Thinking in Epidemiology having very good arrangement in word and layout, so you will not really feel uninterested in reading.

#### **Helen Woodson:**

Precisely why? Because this Statistical Thinking in Epidemiology is an unordinary book that the inside of the reserve waiting for you to snap that but latter it will shock you with the secret the idea inside. Reading this book beside it was fantastic author who else write the book in such amazing way makes the content inside easier to understand, entertaining means but still convey the meaning thoroughly. So , it is good for you because of not hesitating having this any longer or you going to regret it. This book will give you a lot of positive aspects than the other book possess such as help improving your talent and your critical thinking approach. So , still want to hold off having that book? If I were being you I will go to the publication store hurriedly.

#### **Erica Futch:**

Don't be worry if you are afraid that this book may filled the space in your house, you might have it in e-book method, more simple and reachable. This specific Statistical Thinking in Epidemiology can give you a lot of close friends because by you investigating this one book you have matter that they don't and make anyone more like an interesting person. This book can be one of a step for you to get success. This book offer you information that maybe your friend doesn't realize, by knowing more than different make you to be great individuals. So , why hesitate? We need to have Statistical Thinking in Epidemiology.
