CHICAGO, Fisher Building. ST. PAUL, Endicott Building. SAN FRANCISCO, James Flood Building. BETHLEHEM STEEL COMPANY, INTRODUCTION. The purpose of this work, in general, is to supply information and tables, relating to steel construction, of value and service to those interested and engaged in the use of Bethlehem structural steel shapes and, in particular, to illustrate the advantages and economy of the special structural steel shapes introduced and manufactured by Bethlehem Steel Company. The work is divided into three parts. Part I gives the dimensions, weights and structural properties of the Bethlehem special shapes, or wide flange beam sections, with tables of strength and other data relating to their use as beams, girders and columns in construction. Part II gives similar information and data pertaining to the standard structural steel shapes manufactured by Bethlehem Steel Company. Part III gives information and data concerning steel construction in general, together with a collection of useful tables, rules, etc., for the engineer, architect and draftsman engaged in structural work. The essential data relating to all the special and standard structural steel shapes manufactured by Bethlehem Steel Company is given in Parts I and II. General information applying to both special and standard shapes is given in Part III, as well as much other data that pertains to structural materials not manufactured by Bethlehem Steel Company. The latter data has been selected as a collection of matter of the most frequent use and service to those engaged in structural work. Special care has been exercised in the arrangement of the tabular matter to secure compactness of form and convenience for the use of the designer. Such of the tables as were not calculated expressly for this work were obtained from works of presumably independent origin, which were compared for the elimination of errors.
