From centuries, milk is believed to be a vital nutrition for human body. Cheese is famously known to be an outcome of milk fermentation.

Cheese is not a simple food; rather it comes with the most astonishing diversification of its own versions than any other food item in the world. Classification of cheese is not only based upon by its types but its roots goes back to ancient mythologies involving various groups, civilizations, gods, mortals and conquerors; a fact which makes it hard to believe the complexity of apparently as simple food as cheese.

The exact origin of cheese is yet unknown, but it is principally reasoned that cheese was primitively made from the lactation of milk animals which were used to be domesticated in ancient times. The science of transforming milk into cheese was most rigorously practiced in Europe, particularly Rome. Art of cheese making is thus a very interesting phenomenon.
