Life Science Ethics

Life Science Ethics

The first section of Life Science Ethics introduces students to essential background concepts in moral theory -- ethics, the relationship of religion to ethics, how to assess ethical arguments, and a method used to reason about ethical theories. The next section demonstrates the relevance of ethical reasoning to six topics:

- The relative moral standing of ecosystems, nonhuman animals, and future human generations
- The moral justifiability of genetic engineering as a whole and the patenting of life forms in particular
- Our duty to aid the hungry
- Our obligation to animals used to produce fiber, food, and knowledge
- Public policies to adjudicate conflicting rights claims among urban consumers, environmentalists, and farmers over the use of water and land
- The virtues traditionally associated with family farms

Part three provides a dozen case studies and study questions to raise relevant ethical issues and draw readers into concrete discussions of complex moral questions.
